

CASE STUDY

Surface Preparation

London barge preparation and coating

This is a London barge, which will be used as a restaurant on the Thames in the future.

We cleaned the barge and coated it using Jotun Marathon 550 paint.

The paint is applied to unblasted steel, and is a two part polyamine and epoxy coating. Ideal for tidal or splash zones, and can be applied to carbon steel, galvanized steel, stainless steel and concrete substrates.

The paint has to be applied at exactly the right thickness to ensure its integrity.
